

Installing your YouView box – Plusnet Help

(DESCRIPTION)

A woman in a Plusnet shirt standing in front of a Plusnet banner.

(SPEECH)

Hi, I'm Katie and welcome to Plusnet Help.

Today I'm going to talk about YouView TV from Plusnet.

This video will show you how to setup your YouView box.

In your box you should have: Your YouView box, a 10m LAN cable, a HDMI cable, a YouView remote and the power supply.

Firstly, start by putting the power supply together. This is done by just sliding the 3pin connection into the socket in the main unit.

Next, you'll need to go to your TV and pop your aerial cable into the back of the box like so. This will feed the Freeview channels to your TV when setup is complete.

You will then pop your HDMI cable into the back of the box, and the other end into your TV. Make a note of the HDMI port that you have chosen to use.

Now just put your LAN cable into the back of your box and the other end will go into your router or any powerline adapters you may have. This will provide the connection for your on demand services, channel guide and any channel packs that you may have opted to take.

Now insert your power pack into the back of your YouView box and a nearby plug socket.

And finally you're all good to go.

We have made a simple guide on getting started with your YouView box and you can watch that [here](#).
